

OPEN GUIDELINES SOFTWARE ENGINEERING VOLUNTEER PROJECT

Open Guidelines is an initiative focused on providing free, unrestricted access to clinical guidelines used by healthcare professionals in hospitals.

We are seeking support to modernize and restore a clinical guidelines mobile application used by doctors, nurses, midwives, and biomedical technicians in Malawi. The application provides access to neonatal and newborn care guidelines developed in partnership with Malawi's Ministry of Health and NEST 360° (Rice University and Malawi College of Medicine), supporting healthcare workers in the management of neonatal morbidity and mortality and the use of essential newborn care technologies.

The original application has become outdated and is no longer available on the Apple App Store or Google Play Store due to device incompatibilities. Despite this, clinicians in Malawi continue to request access to the resource. The project involves rebuilding, updating, or maintaining the application to ensure modern device compatibility, accessibility, and continued dissemination of critical clinical guidance for maternal, newborn, and child health care across Malawi. Any contribution toward redevelopment, technical implementation, or long-term sustainability would have a meaningful impact.

1. WHAT YOU WILL DO

- Migrate the existing codebase from Kotlin to React Native
- Redeploy the application on the iOS app store and Android app store
- Engineer a Retrieval Augmented Generation (RAG) chatbot integration to the app
- Create a CI/CD pipelines on the GitHub and create an accurate source of documentation.
- Sit in on calls with the customer

Overall, it's a learning opportunity for anyone who wants to come onboard. There's no prerequisites to working on this project. Knowing how tough the job market is, I would like to help others out.

2. TIME COMMITMENT

You can commit as little or as much time as you would like to the project. It is a volunteer effort so all efforts towards the cause is greatly appreciated.
